

ApplianceRepair Pro — WordPress Theme

A WordPress theme for independent appliance repair businesses operating in the US market. Covers multiple brands (Bosch, Electrolux, Frigidaire, KitchenAid, LG, Maytag, Samsung, Whirlpool) and appliance types (Washer, Dryer, Dishwasher, Refrigerator, Oven/Range). Built with pure PHP/CSS/JS — no build tools required.

1. Project Overview

Item	Detail
Theme Name	ApplianceRepair Pro
WordPress	6.0+
PHP	8.0+
Build step	None — edit files directly
Required plugins	Advanced Custom Fields (ACF), Yoast SEO or RankMath
Markets	United States only

Brands Covered

- Bosch, Electrolux, Frigidaire, KitchenAid, LG, Maytag, Samsung, Whirlpool

Appliance Types

- Washer, Dryer, Dishwasher, Refrigerator, Oven/Range

Content at a Glance

- **Services pages** — one per brand × appliance type combination (e.g., Bosch Dishwasher Repair, LG Washer Repair)
- **Error code pages** — one per error code per brand (e.g., Bosch E22, Samsung 4E, LG OE)
- **Location pages** — one per service city
- **Guides** — how-to repair and maintenance articles
- **Recalls** — CPSC-sourced recall notices

URL Structure

```
/services/                                ← service archive
/services/{brand}-{appliance}-repair/

/error-codes/                             ← error code archive
/error-codes/{appliance}/{slug}/          ← single error code

/locations/                               ← location archive
/locations/{city}/
```

```

/guides/                ← guides archive
/guides/{slug}/

/recalls/              ← recalls archive
/recalls/{slug}/

```

2. File Structure

3. Architecture

No Build Step

There is no webpack, Vite, npm, or Composer. Edit PHP, CSS, and JS files directly. After changing CSS or JS, bump `AR_VERSION` in `functions.php` to bust browser caches:

```
define('AR_VERSION', '1.3.0');
```

Functions-First Design

All theme logic lives in `functions.php`:

- Custom Post Type registration
- Taxonomy registration
- Rewrite rules
- Asset enqueue
- AJAX handler (`ar_handle_form`)
- All helper functions (`ar_get_phone()`, `ar_disclaimer()`, etc.)
- Theme settings page (under Appearance → Theme Settings)
- Schema JSON-LD output
- SEO meta tag output

The files in `inc/schema-markup.php` and `inc/seo-meta.php` are stubs only — do not add logic there.

Template Routing

Standard WordPress template hierarchy is **bypassed**. A `template_include` filter maps CPT singles and archives to the correct file:

```
CPT single  → templates/template-{post_type}.php
CPT archive → templates/archive-{post_type}.php
```

Exception: `error_code` singles use nested URLs (`/error-codes/{appliance}/{slug}/`) handled via custom rewrite rules.

4. Custom Post Types

Post Type	Slug	Archive URL	Template
service_page	/services/	/services/	templates/template-service.php
location_page	/locations/	/locations/	templates/template-location.php
error_code	/error-codes/	/error-codes/	templates/template-error-code.php
guide	/guides/	/guides/	templates/template-guide.php
recall	/recalls/	/recalls/	templates/template-recall.php
appointment_lead	private	admin-only	—

error_code Nested URLs

Error code pages use a two-level URL:

```
/error-codes/{appliance-slug}/{error-code-slug}/
```

Example: `/error-codes/dishwasher/bosch-e22-error-code/`

This is handled by custom rewrite rules registered in `functions.php`. After adding new appliance types, always flush rewrite rules at **Settings** → **Permalinks** → **Save Changes**.

5. Taxonomies

Taxonomy	Type	Used By	Description
brand	Flat	service_page, error_code, guide, recall	Appliance brand (Bosch, LG, etc.)
appliance_type	Hierarchical	service_page, error_code, guide	Appliance category (Washer, Dryer, etc.)
city	Hierarchical	location_page	Service city
blog_category	Flat	guide	Guide category

6. ACF Meta Fields

ACF fields use the `_ar_` prefix. Field groups are defined in `acf-json/` and sync automatically.

service_page

Field Key	Type	Description
_ar_brand	text	Brand name

Field Key	Type	Description
_ar_appliance_type	text	Appliance type label
_ar_intro	textarea	Intro paragraph
_ar_services_list	repeater	List of services offered
_ar_why_us	textarea	Why choose us section
_ar_faqs	repeater	FAQs (question + answer)

error_code

Field Key	Type	Description
_ar_brand	text	Brand name
_ar_appliance_type	text	Appliance type
_ar_error_code	text	The error code (e.g., E22, F8 E1)
_ar_code_meaning	textarea	Full explanation of the error code
_ar_causes	repeater	Causes (title + description)
_ar_diy_steps	repeater	DIY troubleshooting steps
_ar_cost_range	text	Estimated repair cost (e.g., \$145 – \$385)
_ar_faqs	repeater	FAQs
_ar_us_models	text	US model numbers affected

location_page

Field Key	Type	Description
_ar_city	text	City name
_ar_state	text	State abbreviation
_ar_zip_codes	text	Zip codes served
_ar_neighborhoods	textarea	Neighborhoods/areas covered
_ar_intro	textarea	City intro paragraph
_ar_faqs	repeater	Local FAQs

guide

Field Key	Type	Description
_ar_brand	text	Brand name (if brand-specific)
_ar_appliance_type	text	Appliance type

Field Key	Type	Description
_ar_intro	textarea	Guide introduction
_ar_steps	repeater	How-to steps
_ar_faqs	repeater	FAQs

7. Template Routing Detail

The `template_include` filter in `functions.php` runs on every request:

```
add_filter('template_include', function($template) {
    if (is_singular('service_page')) return get_template_directory() .
'/templates/template-service.php';
    if (is_singular('error_code')) return get_template_directory() .
'/templates/template-error-code.php';
    if (is_singular('location_page')) return get_template_directory() .
'/templates/template-location.php';
    if (is_singular('guide')) return get_template_directory() .
'/templates/template-guide.php';
    if (is_singular('recall')) return get_template_directory() .
'/templates/template-recall.php';
    if (is_post_type_archive('service_page')) return get_template_directory() .
'/templates/archive-service.php';
    if (is_post_type_archive('error_code')) return get_template_directory() .
'/templates/archive-error-code.php';
    if (is_post_type_archive('location_page')) return get_template_directory() .
'/templates/archive-location.php';
    if (is_post_type_archive('guide')) return get_template_directory() .
'/templates/archive-guide.php';
    if (is_post_type_archive('recall')) return get_template_directory() .
'/templates/archive-recall.php';
    return $template;
});
```

8. CSS Architecture

CSS loads in dependency order via `wp_enqueue_style`:

```
variables.css → base.css → components.css → templates.css
```

Design Tokens (variables.css)

All colors, spacing, border-radius, and typography scale are defined as CSS custom properties:

```
--color-primary: #be1622;      /* Brand red */
--color-accent: #be1622;
--color-dark: #1a1a1a;
--color-text: #333;
--color-muted: #666;
--color-bg: #f8f8f8;
--color-white: #fff;

--space-1 through --space-20  /* 4px base scale */
--radius-sm / --radius-md / --radius-lg
--font-sans / --font-heading
--shadow-sm / --shadow-md / --shadow-lg
```

Fonts

- Headings: Inter (Google Fonts, loaded in `header.php`)
- Body: System font stack

Editor Styles

`assets/css/editor.css` mirrors key design tokens so the block editor matches the front end.

9. JavaScript

`assets/js/main.js` is vanilla JS — no jQuery, no frameworks.

Localized Data

PHP passes data to JS via `wp_localize_script`:

```
arAjax = {
  url:    '/wp-admin/admin-ajax.php',
  nonce:  '...',
  phone:  '(555) 123-4567'
}
```

Features

- **Appointment form** — AJAX submit to `ar_appointment` action, inline success/error messages
- **FAQ accordion** — click-to-expand, ARIA attributes updated
- **Sticky phone CTA** — appears on scroll, hidden when form is visible
- **Smooth scroll** — anchor links within error code archive sections
- **Mobile nav toggle** — hamburger menu for small screens
- **Error code filter** — live search/filter on archive page directory table

AJAX Handler

```
// functions.php
add_action('wp_ajax_ar_appointment',      'ar_handle_form');
add_action('wp_ajax_nopriv_ar_appointment', 'ar_handle_form');
```

10. Helper Functions

All defined in `functions.php`:

Function	Signature	Returns
<code>ar_get_phone</code>	<code>ar_get_phone(): string</code>	Business phone number
<code>ar_get_business_name</code>	<code>ar_get_business_name(): string</code>	Business name
<code>ar_get_address</code>	<code>ar_get_address(): string</code>	Business address
<code>ar_get_email</code>	<code>ar_get_email(): string</code>	Contact email
<code>ar_disclaimer</code>	<code>ar_disclaimer(string \$brand=''): void</code>	Echoes disclaimer aside
<code>ar_trust_bar</code>	<code>ar_trust_bar(): void</code>	Renders trust-bar.php part
<code>ar_appointment_form</code>	<code>ar_appointment_form(string \$context, string \$heading): void</code>	Renders appointment-form.php
<code>ar_faq_section</code>	<code>ar_faq_section(array \$faqs, string \$heading): void</code>	Renders faq-accordion.php
<code>ar_output_schema</code>	<code>ar_output_schema(array \$schema): void</code>	Echoes JSON-LD script block
<code>ar_output_seo_meta</code>	<code>ar_output_seo_meta(): void</code>	Echoes meta tags (only if no SEO plugin)

ar_disclaimer() Detail

The disclaimer rotates between 4 text variations. The variation is chosen deterministically using `crc32(post_id . brand) % 4` so each page always shows the same variant across requests (important for SEO consistency). All variations satisfy the independent-service legal disclosure requirement.

11. Content Data & Import

Data Files

File	Function	Coverage
<code>inc/all-brands-error-codes-data.php</code>	<code>ar_error_codes_{brand}()</code>	Error code content for all 8 brands

File	Function	Coverage
inc/all-brands-content-data.php	ar_service_content_{brand}()	Service page content for all 8 brands

Each function returns an array of post arrays ready for `wp_insert_post()` + `update_post_meta()`.

Importing with WP-CLI

Run on the server (or via Local's WP-CLI):

```
# Import error codes
wp eval-file import-error-codes.php --path=/path/to/wordpress

# Import service pages
wp eval-file import-services.php --path=/path/to/wordpress
```

Content Requirements (Error Code Pages)

Every error code page must meet:

- **400-word minimum** (combined from `_ar_code_meaning` + causes + DIY steps + FAQs)
- US-market model numbers in `_ar_us_models`
- 3–5 causes with 50–60 word descriptions each
- 3–4 DIY troubleshooting steps
- 4–5 FAQs
- Cost range in `_ar_cost_range` (USD)

SEO Keywords (per error code page)

Must include naturally: brand name, appliance type, error code, "error code", "repair", city/region keywords, "OEM parts", "certified technicians", "12-month warranty".

12. SEO & Schema

Meta Tags

`ar_output_seo_meta()` fires only when neither Yoast SEO (`WPSEO_VERSION`) nor RankMath (`RANK_MATH_VERSION`) is active. When a SEO plugin is active, it handles all meta tags.

Schema JSON-LD

Schema is always output independently of SEO plugins via `ar_output_schema()`:

Template	Schema Types
template-service.php	Service, FAQPage, BreadcrumbList, LocalBusiness
template-error-code.php	HowTo, FAQPage, BreadcrumbList

Template	Schema Types
template-location.php	LocalBusiness, FAQPage, BreadcrumbList
template-guide.php	HowTo, FAQPage, BreadcrumbList
template-recall.php	NewsArticle, BreadcrumbList
front-page.php	LocalBusiness, FAQPage

Brand-Specific US Market Notes

- **Bosch:** Exited US washer/dryer market in 2013 — no Bosch Washer Repair or Bosch Dryer Repair service pages
- All error codes reference US model numbers (e.g., SHPM88Z75N, KFWF505ESS)
- Cost ranges are in USD, calibrated for US labor rates

13. Reusable Template Parts

Trust Bar

```
ar_trust_bar();
// Renders: parts/trust-bar.php
// Shows: star rating, review count, years in business, warranty badge, BBB accreditation
```

Appointment Form

```
ar_appointment_form('service', 'Book Your Repair Today');
ar_appointment_form('error-code', 'Get This Error Code Fixed');
// Renders: parts/appointment-form.php
// Fields: name, phone, email, appliance type, brand, message
// Submits via AJAX to ar_appointment action
```

FAQ Accordion

```
ar_faq_section($faqs_array, 'Frequently Asked Questions');
// Renders: parts/faq-accordion.php
// $faqs_array: [ ['question' => '...', 'answer' => '...'], ... ]
// Includes FAQPage schema JSON-LD
```

Disclaimer

```
ar_disclaimer('Bosch');
ar_disclaimer(); // generic version
// Echoes: <aside class="disclaimer disclaimer--prominent" ...>
// Required on every template
```

14. Theme Settings

Settings stored in `wp_options` with `ar_` prefix. Managed via **Appearance** → **Theme Settings**.

Option Key	Description	Example
<code>ar_phone</code>	Business phone	(555) 123-4567
<code>ar_business_name</code>	Business name	ApplianceRepair Pro
<code>ar_address</code>	Full address	123 Main St, Chicago, IL 60601
<code>ar_email</code>	Contact email	info@appliancerepairpro.com
<code>ar_license</code>	License/certification number	IL-APR-12345

15. Development Notes

After Changing CSS or JS

Bump `AR_VERSION` in `functions.php`:

```
define('AR_VERSION', '1.3.0'); // increment minor or patch version
```

After Adding a New CPT or Rewrite Rule

Go to **Settings** → **Permalinks** → **Save Changes** to flush rewrite rules. On theme activation this happens automatically.

After Adding ACF Fields

If ACF field groups don't appear in the editor, go to **Custom Fields** → **Tools** → **Sync** and sync all groups from `acf-json/`.

Adding a New Brand

- 1. Add brand term to `brand` taxonomy (Dashboard → Brands → Add New)
- 2. Add content data function `ar_service_content_{brand}()` in `inc/all-brands-content-data.php`
- 3. Add error code data function `ar_error_codes_{brand}()` in `inc/all-brands-error-codes-data.php`
- 4. Run import scripts via WP-CLI
- 5. Check US market constraints (e.g., brand may not make certain appliances in the US)

Adding a New City

1. Add city term to **city** taxonomy
2. Create a **location_page** post and assign the city term
3. Fill ACF fields: **_ar_city**, **_ar_state**, **_ar_zip_codes**, **_ar_neighborhoods**, **_ar_intro**, **_ar_faqs**

Local Development (Local by Flywheel)

- MySQL port: **10005**, host: **127.0.0.1**, user: **root**, password: **root**
- mysqldump path: **C:\Users\Administrator\AppData\Roaming\Local\lightning-services\mysql-8.0.35+4\bin\win64\bin\mysqldump.exe**
- WP-CLI: **C:\Users\Administrator\Desktop\wp-cli.phar**
- Custom php.ini: **C:\Users\Administrator\AppData\Roaming\Local\run\lightning\php\php.ini**

16. Deploying to Hostinger

Step 1 — Prepare fresh files locally

A) Export the database

Open PowerShell and run:

```
& "C:\Users\Administrator\AppData\Roaming\Local\lightning-services\mysql-8.0.35+4\bin\win64\bin\mysqldump.exe" --host=127.0.0.1 --port=10005 --user=root --password=root local > C:\Users\Administrator\Desktop\appliancerepair_db_export.sql
```

B) Zip the theme

```
Compress-Archive -Path "C:\Users\Administrator\Local Sites\appliancerepair\app\public\wp-content\themes\wp-appliancerepair-theme" -DestinationPath "C:\Users\Administrator\Desktop\appliancerepair_theme.zip" -Force
```

C) Zip the plugins

```
Compress-Archive -Path "C:\Users\Administrator\Local Sites\appliancerepair\app\public\wp-content\plugins\advanced-custom-fields", "C:\Users\Administrator\Local Sites\appliancerepair\app\public\wp-content\plugins\wordpress-seo" -DestinationPath "C:\Users\Administrator\Desktop\appliancerepair_plugins.zip" -Force
```

Step 2 — Set up WordPress on Hostinger

1. Log in to **hPanel** → **Website** → **Auto Installer** → **WordPress**
2. Fill in site title, admin username, password, email

3. **Note down** the database name, database user, and database password it creates

Step 3 — Import the database

1. In hPanel → **Databases** → **phpMyAdmin**
2. Select your WordPress database from the left panel
3. Click **Import** → choose `appliancerepair_db_export.sql` → click **Go**
4. After import, go to the **SQL** tab and run this to update the site URL (replace `yourdomain.com`):

```
UPDATE wp_options SET option_value = 'https://yourdomain.com' WHERE option_name IN ('siteurl', 'home');
```

Step 4 — Upload the theme

1. In hPanel → **File Manager** → navigate to `public_html/wp-content/themes/`
2. Upload `appliancerepair_theme.zip` → right-click → **Extract**
3. You should now see the folder `wp-appliancerepair-theme/` there

Step 5 — Upload the plugins

1. Navigate to `public_html/wp-content/plugins/`
2. Upload `appliancerepair_plugins.zip` → **Extract**

Step 6 — Update wp-config.php

1. In File Manager open `public_html/wp-config.php`
2. Update these 4 lines with your Hostinger database credentials:

```
define( 'DB_NAME',      'your_db_name' );
define( 'DB_USER',      'your_db_user' );
define( 'DB_PASSWORD', 'your_db_password' );
define( 'DB_HOST',      'localhost' );
```

3. Replace the secret keys block — generate fresh ones at: <https://api.wordpress.org/secret-key/1.1/salt/>

Step 7 — WordPress admin setup

Log in to <https://yourdomain.com/wp-admin> with your credentials, then:

Task	Where
Activate theme	Appearance → Themes → Activate ApplianceRepair Pro

Task	Where
Activate plugins	Plugins → Activate ACF and Yoast SEO
Sync ACF fields	Custom Fields → Tools → Sync all
Flush permalinks	Settings → Permalinks → Save Changes
Enter business info	Appearance → Theme Settings → fill phone, name, address, email

Step 8 — Test

- ☐ [yourdomain.com](#) loads homepage
- ☐ [yourdomain.com/services/](#) shows service pages
- ☐ [yourdomain.com/error-codes/](#) shows error code archive
- ☐ [yourdomain.com/schedule/](#) shows the appointment page
- ☐ FAQ accordion opens/closes
- ☐ Appointment form submits successfully

Note: On Hostinger's shared hosting, `DB_HOST` is almost always `localhost`. If you get a database connection error, check hPanel → Databases for the exact hostname.

17. Post-Deployment Checklist

Core Setup

- ☐ WordPress installed and accessible at your domain
- ☐ Theme activated (Appearance → Themes)
- ☐ ACF and Yoast SEO plugins activated
- ☐ ACF field groups synced (Custom Fields → Tools → Sync)
- ☐ Permalinks flushed (Settings → Permalinks → Save Changes)
- ☐ Theme Settings filled in (Appearance → Theme Settings)
- ☐ wp-config.php has correct DB credentials and fresh security keys

Content Verification

- ☐ Service pages visible at [/services/](#)
- ☐ Error codes visible at [/error-codes/](#)
- ☐ Error code archive groups correctly by appliance type
- ☐ Location pages visible at [/locations/](#)
- ☐ Guides visible at [/guides/](#)
- ☐ Homepage loads correctly at domain root
- ☐ Appointment form submits successfully (check email delivery)

SEO

- ☐ Yoast SEO configured with business info (SEO → General)
- ☐ XML sitemap generated and accessible at [/sitemap_index.xml](#)
- ☐ Google Search Console: add property and submit sitemap

- ☐ Google Analytics or similar tracking installed
- ☐ Schema markup verified with Google's Rich Results Test

Performance

- ☐ Caching plugin installed and active (e.g., WP Super Cache, LiteSpeed Cache)
- ☐ Images optimized before upload (use WebP where possible)
- ☐ Hostinger's LiteSpeed cache enabled in hPanel if available

Legal / Compliance

- ☐ Disclaimer appears on all service and error code pages
 - ☐ Privacy Policy page created and linked in footer
 - ☐ Terms of Service page created and linked in footer
 - ☐ Google Business Profile updated with correct address and phone
-
